The annotations give references to previous Ecuadorian records for the species, and also the sex, date of collection and locality of the specimens, the color of the bill, etc., in life, with remarks on variations of plumage. This report on Dr. Festa's work thus forms a most important contribution to South American ornithology. -J. A. A.

Bangs on Birds from the Sierra Nevada de Santa Marta, Colombia.1-This is Mr. Bangs's fourth paper on the birds of this region, and relates to collections made by Mr. Wilmot W. Brown, Jr., from January to April, 1899, at altitudes varying from 3,000 to 15,000 feet. The list includes 68 species, of which 13 are described as new, namely: (1) Pharomachrus festatus, (2) Metallura districta, (3) Ochthodiæta pernix, (4) Hapalocercus paulus, (5) Myiopatis montensis, (6) Pipreola aureipectus decora, (7) Sclerurus albigularis propinguns, (8) Conopophaga browni, (9) Scytalopus latebricola, (10) Haplospiza nivaria, (11) Cinclus rivularis, (12) Troglodytes monticola, (13) Merula albiventris fusa. The list relates for the most part to species not previously taken by Mr. Brown, but additional specimens of some of the rarer forms are recorded. Thus an additional specimen of Mr. Bangs's Leucaria phalerata (figured in 'The Auk,' XVI, 1899, plate ii), previously known to Mr. Bangs only from the type, is reported. This is doubtless not a rare species at favorable localities, the American Museum of Natural History having received five specimens in a collection made by Mr. II. II. Smith in the same general region. These specimens show that the tail is not always pure white, being considerably shaded with dusky in immature birds. - J. A. A.

Pearson's Preliminary List of Birds of Chapel Hill, N. C.²—As the title implies, this List is put forth as only an imperfect enumeration of the birds occurring at Chapel Hill, North Carolina. The period of observation is comparatively brief, and the species listed number only 132, but include only such as have been observed and positively identified. The annotations relate mainly to the seasons and manner of occurrence of the species noted. It is therefore a good list as far as it goes, but it is unfortunately marred by careless proofreading.—J. A. A.

Kellogg's List of Biting Lice (Mallophaga) taken from North Ameri-
